MM-DOCS

This project is used to produce all forms of documentation for the service using Markdown and other repository friendly markup languages.

The documentation is created using the mm-docs docker bundle:

- https://github.com/majkinetor/mm-docs

Features

- Write documentation in extended Markdown, HTML, PlantUML and other markup languages
- Beautiful responsive design using material theme
- Navigational bar, TOC, search, internationalization, and various rich presentation functionalities
- Rich diagrams and interface mockups using PlantUML
- Macros can be written in python
- PDF export for each page or full site
- Live reload during editing
- GitLab/GitHub repository connection for editing within a browser
- Automated AppVeyor build and deploy to GitHub pages using Ubuntu image
- Cross platform for hosting and development

Prerequisites

- Docker
- PowerShell (optional, developer friendliness)
    - Invoke-Build module

Quick start

To edit documentation:

- Clone/use new project template
- Add new documents somewhere in the `source\docs` hierarchy.
- Add document path to TOC (file: `source\mkdocs.yml`; yaml key: `nav`) to make page visible in the navigation section, otherwise, the page is available via direct link.

Start development server - run in PowerShell `Invoke-Build Run`. The command is syntax sugar for running docker containers. To build static site run `Invoke-Build Build`.

This is a footer page, edit in footer.md

Demonstration page

mm-docs demonstration page.

For more details about included tools see:

- Mkdocs
- Mkdocs Material Extensions
- PlantUML
- MathJax
- Jinja

Customization

- Color palettes
- Language
- Extending theme

Text

Unicode: Мислим дакле постојим

Basic effects

Output	Code
Bold text	`**Bold text**` or `__Bold text__`
Italic text	`*Italic text*` or `_Italic text_`
~~Strike Through~~	`~~Strike Through~~`
Colored text	`==Colored text==`
`Inline code`	`` `Inline code` ``

Hotkeys

Output	Code
`Enter`	`++enter++`
`PgDown`	`++"PgDown"++`
`Non Existent Key`	`++"Non Existent Key"++`

Links, footnotes and comments

Links

Output	Code
An inline-style link	`[An inline-style link](https://www.google.com)`
An inline-style link with title	`[An inline-style link with title](https://www.google.com "Google's Homepage")`
Reference-style link	`[Reference-style link][arbitrary reference text]` `[arbitrary reference text]: https://www.mozilla.org`
Relative reference to a repository file	`[Relative reference to a repository file](../about/overview)`
Numbers for reference-style link definitions	`[Numbers for reference-style link definitions][1]` `[1]: http://slashdot.org`
Use the link text itself	`Use the [link text itself]` `[link text itself]: http://www.reddit.com`

Magic links and emails: turned to links as recognized

Output	Code
http://www.google.com	`http://www.google.com`

Output	Code
majkinetor@gmail.com	`majkinetor@gmail.com`
www.google.com	`www.google.com`

Footnotes

```
A text with a short footnote[^short]
[^short]: https://en.wikipedia.org/wiki/Note_(typography)
```

A text with a short footnote[1]

```
A text with a long footnote[^long]
[^long]:
    Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nulla et euismod
    massa, nec semper lorem quam in massa.

    ```
    code
```

A text with a long footnote[2]

Comments

```
The text contains 2 comments bellow this line which should not be visible.
[comment]: # (Developed using Visual Studio Code with plantuml extension: cinst
visualstudiocode; code --install-extension jebbs.plantuml)
[comment]: # (PlantUML version may influence diagrams. This document is developped with
1.2017.15: cinst plantuml --version 1.2017.15)
```

HTML

HTML is allowed without restrictions:

Some big text

Critic and comments

Here is some ~~*incorrect*~~ Markdown. I am adding this here. Here is some more ~~text that I am removing~~text. And here is even more text that I am adding. ~~-~~Paragraph was deleted and replaced with some spaces.

~~-~~

Spaces were removed and a paragraph was added.

And here is a comment on some text/* This works quite well. I just wanted to comment on it. */. Substitutions ~~is~~are great!

General block handling:

~~• test remove~~

~~• test remove~~

• test add

• test add

Emoji

List of emoji codes

- `:tada:` 🎉
- `:jack_o_lantern:` 🎃
- `:alien:` 👽
- `:robot_face:` 🤖
- `:smile:` 😄
- `:heart:` ❤️
- `:thumbsup:` 👍

💜 ❗ 🕐🚜🐔👺

Lists

Ordered list

1. List item 1
2. List item 2
    a. List item 2.1
    b. List item 2.2
        i. List item 2.2.1
        ii. List item 2.2.2
    c. List item 2.3
3. List item 4

Unordered, mixed

- List item 1
- List item 2
    - List item 2.1
    - List item 2.2
        a. List item 2.2.1
        b. List item 2.2.2
    - List item 2.3
- List item 4

Tables

Col1	Col2
row1.1	row1.2
row2.1	row2.2-1 row2.2-2

Plantuml

Add `plantuml` in a block code header to set code section as PlantUml source. Use `format` to specify output type:

```
```plantuml format="svg"
title PlantUml Demo
left to right direction
skinparam packageStyle rectangle
actor customer
actor clerk
rectangle checkout {
  customer -- (checkout)
  (checkout) .> (payment) : include
  (help) .> (checkout) : extends
  (checkout) -- clerk
}
```
```

MathJax

The block code:

```
```
$$
\frac{n!}{k!(n-k)!} = \binom{n}{k}
$$
```
```

\frac{n!}{k!(n-k)!} = \binom{n}{k}

`Inline math expressions: $p(x|y) = \frac{p(y|x)p(x)}{p(y)}$`

Inline math expressions: p(x|y) = \frac{p(y|x)p(x)}{p(y)}

NOTE:

- This doesn't render corretly in PDF output, see this issue for explanation.

Admonition

echo "Hello world!"
```

Abbreviations

The following are defined in single file, `_inc\abbr.md` and included on each page.

- IT, XML, JSON

Smart symbols

- `(tm)` ™
- `(c)` ©
- `c/o` ℅
- `+/-` ±
- `-->` →
- `<--` ←
- `<-->` ↔
- `=/=` ≠
- `1/4` ¼
- `1st` 1st

Task list

- [x] Lorem ipsum dolor sit amet, consectetur adipiscing elit
- [x] Curabitur elit nibh, euismod et ullamcorper at, iaculis feugiat est
- [ ] Vestibulum convallis sit amet nisi a tincidunt
  - [x] In hac habitasse platea dictumst
  - [ ] Praesent sed risus massa
- [ ] Nulla vel eros venenatis, imperdiet enim id, faucibus nisi

Custom span class

Adding custom HTML classes to span elements.

Syntax: `!!<class names>|<text to be wrapped>!!`.

The following example uses css from the custom_css file, classes `color-yellow` and `backgrond-blue`:

- `I love !!color-yellow background-blue|cookies!!` - I love cookies

Macros

More details.

Variable from config	`extra.version = 0.1`
Variable from this page	`acme = Acme Company Ltd`
Macro (defined in `main.py`)	`bar(1) = 9.3` - `barbaz(3) = 9`
Python variable (defined in `main.py`)	`baz = John Doe`
Dictionary variable from config	`company.name = Acme`

Jinja templates

You can do all the work you want with Jinja2, including defining pure macros, conditionals and for loops:

```
{% macro input(name, value='', type='text', size=20) -%}
  <input type="{{ type }}" name="{{ name }}" value="{{ value}}" size="{{ size }}">
{%- endmacro %}

{% input('username') }}
{% input('password', type='password') }}
```

Includes

You may use the include directive from jinja2, directly in your markdown code e.g.:

```
## Paragraph
{%include 'snippet.md' %}
{%include 'html/content1.html' %}
```

The root directory for your included files is in `docs_dir`.

You can also include parts of the file.

Environment variables

Environment variables can be used inside of configuration file `mkdocs.yaml`.

```
site_name: !!python/object/apply:os.getenv ["CI_PROJECT_PATH"]
repo_url: !!python/object/apply:os.getenv ["CI_PROJECT_URL"]
repo_name: !!python/object/apply:os.getenv ["CI_PROJECT_PATH"]
```
