MM-DOCS

This project is used to produce all forms of documentation for the service using Markdown and other repository friendly markup languages.

The documentation is created using the mm-docs docker bundle:

- https://github.com/majkinetor/mm-docs (https://github.com/majkinetor/mm-docs)

Features

- Write documentation in extended Markdown, HTML, PlantUML and other markup languages
- Beautiful responsive design using material theme
- Navigational bar, TOC, search, internationalization, and various rich presentation functionalities
- Rich diagrams and interface mockups using PlantUML
- Macros can be written in python
- PDF export for each page or full site
- Single page with entire documentation
- Live reload during editing
- GitLab/GitHub repository connection for editing within a browser
- Automated AppVeyor build and deploy to GitHub pages using Ubuntu image
- Cross platform for hosting and development

Prerequisites

- Docker
- PowerShell (optional, developer friendliness)
  - Invoke-Build (https://www.powershellgallery.com/packages/InvokeBuild) module

Quick start

To edit documentation:

- Clone/use new project template (https://github.com/majkinetor/mm-docs-template)
- Add new documents somewhere in the `source\docs` hierarchy.
- Add document path to TOC (file: `source\mkdocs.yml`; yaml key: `nav`) to make page visible in the navigation section, otherwise, the page is available via direct link.

Start development server - run in PowerShell `Invoke-Build Run`. The command is syntax sugar for running docker containers. To build static site run `Invoke-Build Build`.

Demonstration page

mm-docs (https://github.com/majkinetor/mm-docs) demonstration page.

For more details about included tools see:

- Mkdocs (https://www.mkdocs.org)
- Mkdocs Material Extensions (https://squidfunk.github.io/mkdocs-material/extensions/admonition)
- PlantUML (http://plantuml.com)
- MathJax (https://www.mathjax.org/)
- Jinja (https://jinja.palletsprojects.com)

Customization

- Color palettes (https://squidfunk.github.io/mkdocs-material/getting-started/#color-palette)
- Language (https://squidfunk.github.io/mkdocs-material/getting-started/#language)
- Extending theme (https://squidfunk.github.io/mkdocs-material/customization/#extending-the-theme)

Text

Unicode: Мислим дакле постојим

Basic effects

Output	Code
Bold text	`**Bold text**` or `__Bold text__`
Italic text	`*Italic text*` or `_Italic text_`
~~Strike Through~~	`~~Strike Through~~`
Colored text	`==Colored text==`
`Inline code`	`` `Inline code` ``

Local files

```
![omg-lolcat](files/omg-lolcat.jpg)
```

Hotkeys

Output	Code
Enter ↵	`++enter++`
PgDown	`++"PgDown"++`
Non Existent Key	`++"Non Existent Key"++`

Links, footnotes and comments

Links

Output	Code
An inline-style link (https://www.google.com)	`[An inline-style link](https://www.google.com)`
An inline-style link with title (https://www.google.com)	`[An inline-style link with title]` `(https://www.google.com "Google's Homepage")`
Reference-style link (https://www.mozilla.org)	`[Reference-style link][arbitrary reference text]` `[arbitrary reference text]: https://www.mozilla.org`

Output	Code
Relative reference to a repository file	`[Relative reference to a repository file]` `(../about/overview)`
Numbers for reference-style link definitions (http://slashdot.org)	`[Numbers for reference-style link definitions][1]` `[1]: http://slashdot.org`
Use the link text itself (http://www.reddit.com)	`Use the [link text itself]` `[link text itself]: http://www.reddit.com`

Magic links and emails: turned to links as recognized

Output	Code
http://www.google.com (http://www.google.com)	`http://www.google.com`
majkinetor@gmail.com	`majkinetor@gmail.com`
www.google.com (http://www.google.com)	`www.google.com`

Footnotes

```
A text with a short footnote[^short]

HTML

HTML is allowed without restrictions. Custom styles are added in `docs\_css\extra.css` file.

```
<div style='background-color: #fdd; padding:1em; text-align: center '>
    <font size="20">
        <span class="yellow bred pl1 pr1">cookies</span>
    </font>
</div>
```

cookies

Critic and comments

Here is some ~~*incorrect*~~ Markdown. I am adding this here. Here is some more ~~text that I am removing~~text. And here is even more text that I am adding. - Paragraph was deleted and replaced with some spaces.

-

Spaces were removed and a paragraph was added.

And here is a comment on some text/* This works quite well. I just wanted to comment on it. */. Substitutions ~~is~~are great!

General block handling:

- ~~test remove~~
- ~~test remove~~

- test add
- test add

Emoji and icons

Use more than 7.000 icons and thousands of emojis in your project documentation with zero effort. Custom icons can be added and used in `mkdocs.yml`, documents and templates.

- More info (https://squidfunk.github.io/mkdocs-material/reference/icons-emojis/#icons-emojis)
- List of emoji codes (https://web.archive.org/save/https://www.webfx.com/tools/emoji-cheat-sheet/)
- `:tada:` 🎉
- `:jack_o_lantern:` 🎃
- `:alien:` 👽
- `:robot_face:` 🤖
- `:smile:` 😄
- `:heart:` ❤️
- `:thumbsup:` 👍

💜 ❗ 🕐🚜🐔👺

- :material-account-circle: – `.icons/material/account-circle.svg`
- :fontawesome-regular-laugh-wink: – `.icons/fontawesome/regular/laugh-wink.svg`
- :octicons-octoface-24: – `.icons/octicons/octoface-24.svg`

Lists

Ordered list

1. List item 1
2. List item 2
    a. List item 2.1

    b. List item 2.2
        i. List item 2.2.1
        ii. List item 2.2.2
    c. List item 2.3
3. List item 4

Unordered, mixed

- List item 1
- List item 2
    - List item 2.1
    - List item 2.2
        a. List item 2.2.1
        b. List item 2.2.2
    - List item 2.3
- List item 4

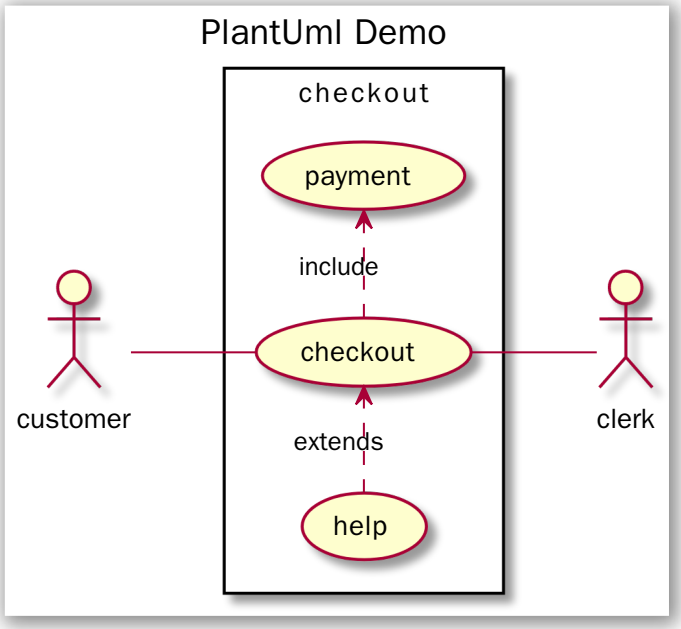
Tables

Col1	Col2
row1.1	row1.2
row2.1	row2.2-1 row2.2-2

Plantuml

Add `plantuml` in a block code header to set code section as PlantUml source. Use `format` to specify output type:

```plantuml format="svg"
title PlantUml Demo
left to right direction
skinparam packageStyle rectangle
actor customer
actor clerk
rectangle checkout {
  customer -- (checkout)
  (checkout) .> (payment) : include
  (help) .> (checkout) : extends
  (checkout) -- clerk
}
```



MathJax

The block code:

```
$$
\frac{n!}{k!(n-k)!} = \binom{n}{k}
$$
```

$$
\frac{n!}{k!(n-k)!} = \binom{n}{k}
$$

`Inline math expressions: $p(x|y) = \frac{p(y|x)p(x)}{p(y)}$`

Inline math expressions: $p(x|y) = \frac{p(y|x)p(x)}{p(y)}$

NOTE:

- This doesn't render corretly in PDF output, see this (https://github.com/zhaoterryy/mkdocs-pdf-export-plugin/issues/18) issue for explanation.

Admonition

More info (https://squidfunk.github.io/mkdocs-material/extensions/admonition/)

Note

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nulla et euismod nulla. Curabitur feugiat, tortor non consequat finibus, justo purus auctor massa, nec semper lorem quam in massa.

Collapsed closed

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nulla et euismod nulla. Curabitur feugiat, tortor non consequat finibus, justo purus auctor massa, nec semper lorem quam in massa.

Collapsed open

Code Highlight

More info (https://squidfunk.github.io/mkdocs-material/extensions/codehilite)

```
import tensorflow as tf
```

With tabs:

Bash

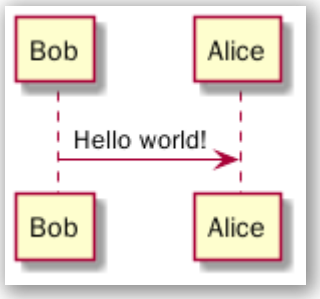
```bash
#!/bin/bash

echo "Hello world!"
```

PowerShell

```powershell
"Hello world!"
```

PlantUML



C

```c
#include <stdio.h>

int main(void) {
  printf("Hello world!\n");
}
```

C++

```cpp
#include <iostream>

int main() {
  std::cout << "Hello world!" << std::endl;
  return 0;
}
```

C#

```csharp
using System;

class Program {
  static void Main(string[] args) {
    Console.WriteLine("Hello world!");
  }
}
```

Abbreviations

The following are defined in single file, `_inc\abbr.md` and included on each page.

- IT, XML, JSON

Smart symbols

- `(tm)` ™
- `(c)` ©
- `c/o` ℅
- `+/-` ±
- `-->` →
- `<--` ←
- `<-->` ↔
- `=/=` ≠
- `1/4` ¼
- `1st` 1st

Task list

- [x] Lorem ipsum dolor sit amet, consectetur adipiscing elit
- [x] Curabitur elit nibh, euismod et ullamcorper at, iaculis feugiat est
- [ ] Vestibulum convallis sit amet nisi a tincidunt
  - [x] In hac habitasse platea dictumst
  - [ ] Praesent sed risus massa
- [ ] Nulla vel eros venenatis, imperdiet enim id, faucibus nisi

Macros

More details (https://github.com/fralau/mkdocs_macros_plugin#overview) .

Variable from config	`extra.version = 0.1`
Variable from this page	`acme = Acme Company Ltd`

Macro (defined in `main.py`)	`bar(1) = 9.3` - `barbaz(3) = 9`
Python variable (defined in `main.py`)	`baz = John Doe`
Dictionary variable from config	`company.name = Acme`

Jinja templates

You can do all the work you want with Jinja2, including defining pure macros, conditionals and for loops:

```
{% macro input(name, value='', type='text', size=20) -%}
  <input type="{{ type }}" name="{{ name }}" value="{{ value}}" size="{{ size }}">
{%- endmacro %}

{% input('username') }}
{% input('password', type='password') }}
```

Includes

You may use the include directive from jinja2, directly in your markdown code e.g.:

```
## Paragraph
{%include 'snippet.md' %}
{%include 'html/content1.html' %}
```

The root directory for your included files is in `docs_dir`.

You can also include parts of the file (https://mkdocs-macros-plugin.readthedocs.io/en/latest/tips/#i-would-like-to-include-a-text-file-from-line-a-to-line-b) .

Environment variables

Environment variables can be used inside of configuration file `mkdocs.yaml`.

```
site_name: !!python/object/apply:os.getenv ["CI_PROJECT_PATH"]
repo_url: !!python/object/apply:os.getenv ["CI_PROJECT_URL"]
repo_name: !!python/object/apply:os.getenv ["CI_PROJECT_PATH"]
```
